ROSSIGNOL[®]
PRO

rossignol.fr

French manufacturer of solutions for Waste Sorting, Urban Furniture and Hygiene Equipment.

editorial

1896, date of creation of the company, which has industrialised throughout its history and which is now a major player in selective sorting, street furniture and sanitary equipment.

100 employees work everyday in our factory in Mayenne (Western France), to contribute their know-how to design, produce and market innovative high-quality "Made in France" products.

20 000 m² logistics platform assuring delivery of your orders to France and abroad.

1407 solutions destined for professional use regrouping our best-sellers for selective sorting, street furniture and hygiene equipment. In the 2024 catalogue you will find our range of responsible and ecological products.

100% recyclable steel is used in the production of our litter bins, street furniture, ashtrays, dispensers and waste bins.

2021, date on which we obtained the Guaranteed French Origin certification. The aim of this commitment is to provide clear and transparent information on the origin of our products. As we are committed to respecting our planet, this action is perfectly in line with the environmental approach we wish to adopt.

+ **2000** customers with whom we are proud to have had a long partnership for many years and who trust us to help them with their interior and exterior design projects. Our values are your values, and it is by continuing to work together to offer design solutions that respect our planet which we'll be able to achieve the greatest possible results.

Eric Fayol

Sales & Marketing Director

OUR **CSR*** COMMITMENT

All responsible, all committed

Since 1896, Rossignol, French company based in Montsurs (Western France), which designs and manufactures products, has always maintained an industrial activity in the same location as where it was founded.

Rossignol, now wants to build on this expertise, in order to broaden our various product offerings: selective sorting solution, street furniture and hygiene equipment.

This significant know-how enables a high level of responsiveness to all requests, not to mention the attentiveness and competence of our sales and technical teams.

This recognition by our customers and users, over the last 125 years, must be maintained based on commitment to sustainable development.

In 2022, Rossignol conducted its first materials analysis. The preparation of this document marks the company's new CSR approach. Rossignol, as a French economic player, contributes to societal issues and along with its stakeholders has identified 3 areas in which it wishes to become a leader.

ENVIRONMENT

- E1 > Energy savings**
- E2 > Adaptation to climate change (water, heat, ...)**
- E3 > Waste Management**
- E4 > Product Quality**

HUMAN

- H1 > Safety and Working Conditions**
- H2 > Involvement and awareness of employees**
- H3 > Well-being at work**
- H4 > Skills development and training**

SUSTAINABILITY

- P1 > Communication Internal-External**
- P2 > Eco-design**
- P3 > Responsible Purchasing**

The best solutions

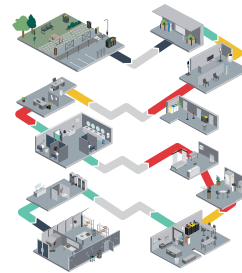

Made in France

ROSSIGNOL promotes Made in France and thus helps maintain jobs, supports companies and the national economy whilst preserving local know-how.

Product solutions for every application

ROSSIGNOL can help you equip all your premises with quality products that reflect its know-how and expertise.

Our solutions

Guaranteed French Origin certification

With this certification ROSSIGNOL enhances the value of its production and ensures the traceability of its products by giving you a clear and objective indication of their origin.

Stand out with made-to-measure products

ROSSIGNOL is here to help you with your projects:

- Tailor-made design,
- Addition of options,
- Customisation (colour, branding, logo, etc)

Installation Service

ROSSIGNOL offers a 5-step turnkey installation solution for selective sorting and street furniture equipment (Currently only available in France)

Our solutions

Customise your products according to your desires

ROSSIGNOL helps you stand out. See our colour chart (pg.8). A large choice of standard ROSSIGNOL colours or specific colours.

Connected solutions

ROSSIGNOL makes it easier for you to manage your collections remotely by monitoring the level of your bins in real time, optimising your rounds and reducing your costs.

Our solutions

Give your food waste a second life

ROSSIGNOL is here to answer your questions regarding food waste and offers you solutions to improve the quality of sorting and recycling this waste

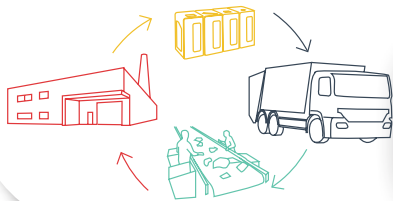

Our solutions

Together, let's recycle our waste

ROSSIGNOL complies with the regulatory requirements for selective sorting and waste collection with recycling bins installed in the administrative and production departments.

An Eco-Responsible Company

ROSSIGNOL is building, step by step, a dynamic approach aimed at respecting the environment and producing sustainably.

Recycled Products

For the good of our planet, ROSSIGNOL has broadened its eco-responsible product base, made from recycled plastic or aseptic packaging.

Our solutions

Regulations adapted to each situation

ROSSIGNOL keeps you informed about regulatory standards and certifications. Find out more on pages 108 to 110

French Regulation adapted to each situation

More details about the regulations can be found on pages 108 to 110

AGEC LAW

Circular economy and responsible supply:
Less waste generation, better sorting, better collection, more reuse and recycling.

FOODWASTE

Waste sorting :
In view of the 2024 law, think about sorting food waste at source!

WASTE SORTING

Waste recycling and recovery:
Sorting is becoming simple and effective for our planet because every little bit helps!

VERMIN CONTROL

Public health:
Avoid accumulation of waste and take necessary measures to control the spread of vermin.

DOG HYGIENE

Cleanliness of public places and pathways:
Do the right thing by picking up your dog waste.

VIGIPIRATE

Prevention and Protection : Take appropriate protective measures by installing products where the content is visible.

CONTACT WITH FOODSTUFFS

Consumer protection:
Avoid the risk of toxicity or alteration of taste and quality of foodstuffs/ beverages by using appropriate food industry approved containers.

HACCP

Food safety in the food and beverage industry:
Ensure and control food safety to prevent hygiene hazards.

ANTI-SMOKING LAW

Cleanliness of our public and common areas:
Think about equipping your outdoor spaces!

PRM

Autonomy and Accessibility :
Install equipment facilitating access for PRM (People of Reduced Mobility).

FIRST AID

Health & safety at work:
Install first aid equipment adapted to the nature of the risks and ensure it is easily accessible.

BLOOD WASTE

Feminine hygiene:
Equip your toilet cubicles reserved for women with a receptacle for sanitary towels.

LEGISLATION

FOOD CONTACT

The legislative framework of the suitability for food contact was defined by European Directive 82/711/EEC of 18 October 1982, as well as by Article 3 of European Regulation 1938/2004. It guarantees that the object and materials of which it is composed pose no toxicity risk when in contact with food or drinks. Good hygiene practices require this type of item be inert when in contact with food, to prevent any migration of products and any catalytic effect that may alter the taste or quality of the foodstuff.

CERTIFICATION

SOFTWOOD CERTIFIED "CLASS 4"

The treatment system is known as autoclave, arsenic-free, in accordance with new European environmental directives. The treatment impregnates the wood to the core, making it rot-proof: resistant to rotting, insects and fungi. It gives the wood a slightly greenish colour that fades with time.

All our wood products comply with the ministerial directive on the promotion of sustainable forest management (decrees of 05/04/05).

In France, 30 billion cigarette butts thrown on the ground

It takes 10 to 12 years for a cigarette butt to breakdown, and just one of them is enough to pollute 500 litres of water.

STOP cigarette butts!

Act now to keep shared spaces clean

Think about equipping your public spaces with our ashtrays.

Can be installed in a vehicle with its wall-mounting

LEGISLATION

FIRST AID

Decree no. 2008-244 of 7 March 2008 concerning the Labour Code contains three basic articles: Article R4224-14 of the Labour Code lays down that "workplaces must be equipped with first-aid equipment that corresponds to the nature of the risks and that is easily accessible". The employer must take the necessary measures to ensure the safety and protect the physical and mental health of workers within its premises.

Insect killers

Kileo

Chain for ceiling-mounting

- + VERY LONG LIFE LED TUBE
- + LOW ENERGY CONSUMPTION

KILEO

ELECTRIFIED GRID INSECT KILLER - 40 W

- Polished stainless steel
- Suspended or free-standing
- On/Off switch on the side
- Electrical protection CL I – IP21

■ Ref. 51441 - 40 W - Range 150 m²

Removable pan

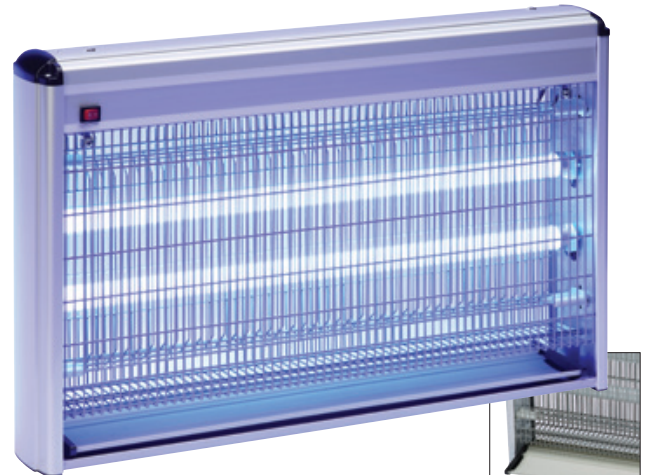

CONSUMABLES

KILEO

PACK OF 4 SHATTER-PROOF FLUORESCENT TUBES + STARTERS

- Lifespan: around 8,000 hours
- Consumable for the electrified grille insect killer 40W (Ref. 51441)

Ref. 51520 - 20 W - Shatter-proof - 4 tubes + 4 starters

KILEO

INSECT KILLER WITH AN ELECTRIFIED LED GRILL - 13 W / 20 W

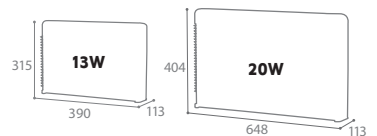

- Aluminium and plastic
- Hanging bracket (clips or free-standing)
- On/Off switch on the side
- Electrical protection CL I – IPX0

■ Ref. 51488 - 13 W - Range 80 m²

■ Ref. 51489 - 20 W - Range 150 m²

Open on both sides for optimal efficiency

Removable pan

CONSUMABLES

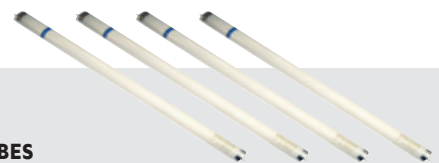

KILEO

PACK OF 4 LED TUBES

- Lifespan: around 15000 hours
- Consumable for insect killers (Ref. 51488 and 51489)

Ref. 51486 - 6.5 W - 4 LED tubes

Ref. 51487 - 10 W - 4 LED tubes

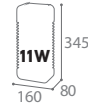

Kileo

ELECTRIFIED GRID INSECT KILLER - 11 W

- ABS plastic, fire-resistant
- Free-standing
- Side switch
- Electrical protection CL II – IPX2
- Mains connection

Ref. 51440 - 11W - Range 80 m²

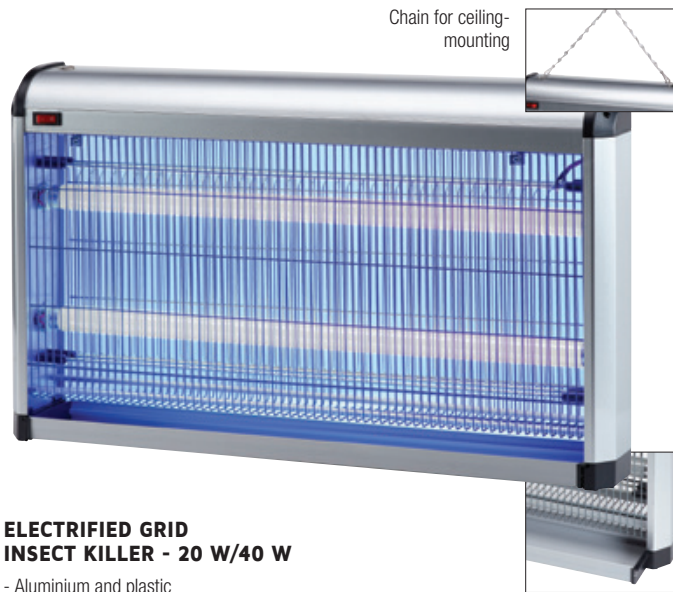

CONSUMABLES

KILEO

COMPACT FLUORESCENT TUBE

- Lifespan: 8,000 hours
 - Consumable for the compact insect killer (Ref. 51440)
- Ref. 51528 - 11 W - per unit

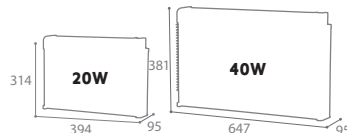

Chain for ceiling-mounting

ELECTRIFIED GRID INSECT KILLER - 20 W/40 W

- Aluminium and plastic
- Suspended or free-standing
- On/Off switch on the front
- Electrical protection CL I - IP21

- Ref. 51536 - 20 W - Range 100 m²
- Ref. 51538 - 40 W - Range 150 m²

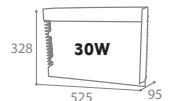

KILEO

GLUE TRAP INSECT KILLER - 30 W

- Anti-UV powder-coated steel
- Wall mounting with plate or suspension with chain
- Glueboard captures insects
- Electrical protection CL I - IPX0 - Mains connection
- **HACCP compliant**

□ Ref. 51490 - 30 W - Range 100 m²

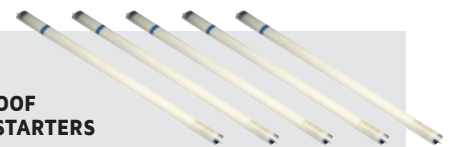

CONSUMABLES

KILEO

PACK OF 5 SHATTER-PROOF FLUORESCENT TUBES + STARTERS

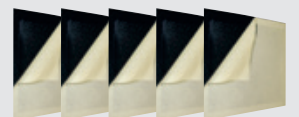

- Lifespan: around 8,000 hours
 - Consumable for the glue trap insect killer 2x15W (Ref 51490)
- Ref. 51492 - 15 W - Shatter-proof - 5 tubes + 5 starters - White

PACK OF 5 GLUEBOARDS

- Glueboard for trapping insects
- Consumable for the glue trap insect killer (Ref 51490)

Ref. 51491 - Pack of 5

CONSUMABLES

KILEO

PACK OF 4 SHATTER-PROOF FLUORESCENT TUBES + STARTERS

- Lifespan: around 8,000 hours
- Consumable for the electrified grid insect killer 20 W (Ref. 51536) and 40W (Ref. 51441 and 51538)

Ref. 51519 - 10 W - Shatter-proof - 4 tubes + 4 starters
 Ref. 51520 - 20 W - Shatter-proof - 4 tubes + 4 starters

Regulatory standards and certifications

AGEC LAW

(ANTI-WASTE FOR A CIRCULAR ECONOMY)

► **Law no. 2020-105-10 February 2020:** TLaw N° 2020-105 10 February 2020: This legislation, in effect since Jan 1st 2020, will run until 2024 to modify in depth the methods of production, distribution and consumption. It aims to transform our linear economy (produce, consume, dispose) into a circular economy.

It is broken down into 5 main areas:

- Take out single use plastic
- Better information for consumers
- Fight against waste and encourage re-use
- Act against planned obsolescence
- Produce better

> See p10-36

WASTE SORTING

Article 88 of the AGEC law 2020, concerning the sorting of food waste at source!

In order to implement the sorting of household food waste at source throughout France by 1 January 2024, it is up to each local authority to study and identify the most relevant solutions to sort food waste at source and ensure that it can be recovered and not landfilled. Separate collection of food waste by local authorities is complementary to local composting.

► The law of 12 July 2010, known as the Grenelle 2 law, introduced an obligation for large producers to sort at source and recover biowaste and waste oils.

Since 1 January 2016, producers of more than 10 tonnes of biowaste and 60 litres of waste oils per year have been concerned.

► The Act of 10 February 2020 on the fight against waste and the circular economy amended Article L. 541-21-1 of the Environmental Code by specifying that from 1 January 2023, this obligation applies to persons who produce or hold more than five tonnes of bio-waste per year. From 1 January 2024, all biowaste and waste oils must be collected separately for recovery.

> See p21, 22, 26, 27, 53

OFG (Origine France Garantie) (GUARANTEE OF FRENCH ORIGIN)

The Origine France Garantie (OFG) label was officially presented to the National Assembly on 19 May 2011. The OFG certification is based on a fully-fledged certification process. Certification is done by authorised organizations. To obtain OFG certification, 2 cumulative criteria are mandatory: the place from where the product gets its essential characteristics is located in France and at least 50% of the unit cost price is acquired in France. The label allows companies to promote the product in France and consumers to choose to buy French.

> See p2-10 à 13-22-26-27-32-38 à 40-45-84

WASTE SORTING

► **Act of 15/07/1975: first act organising the collection and treatment of waste in France.** Waste collection, transport and treatment operations must be carried out under clean conditions in order to avoid "any risk to the environment and human health". This act establishes the founding principle of "polluter pays".

► Law of 13/07/1992: also known as the Royal Act. It aims to reinforce the provisions of the 1975 act and requires companies to recycle their waste. Since 1992, waste has been a source of energy and raw materials that we are no longer allowed to throw away or destroy.

► **Law of 12/07/2010** makes it compulsory for major producers to set up waste sorting and collection of biowaste and edible oil waste (threshold for the application of the Decree in 2016: 10 tonnes per annum of biowaste, 60 L of edible oils).

► **Article L 541-2 of the Environment Code:** each company is responsible for the management of the waste it produces even when it is transferred to a third party for treatment. The company must ensure that its disposal process complies with regulations.

► **Decree no. 2016-288 of 10/03/2016:** It is the duty of each company to sort its paper, metal, plastic, glass and wood waste better so that it may be reused or recycled. Companies must separate these materials from other waste either by having a system at source or by using an automatic sorting system with a third party.

► **From 1 January 2022:** all paper and packaging, whether plastic, metal or cardboard, may be placed in the yellow bins and containers. This new directive will make it possible to reduce the tonnage of household waste produced each year in France, while achieving better recycling of the waste collected.

> Need for waste sorting equipment. See p10-36

► **On 1 January 2025:** the obligation to stream waste will be extended to all public spaces: streets, squares, gardens, beaches, etc. Local authorities will thus be obliged to replace street bins with recycling bins enabling the sorting of packaging and paper. These measures are aimed at speeding up the recovery and recycling of packaging "outside the home".

★★★ CLASSIFICATION OF TOURIST ACCOMMODATION

► **Order of 29/12/21 - published in the "Journal Officiel" on January 14th 2022.**

Since the 1st of April 2022, a new classification of Tourist Accommodation has come into force. It details the criteria setting the standards and classification procedure for tourist accommodation. The "accessibility and sustainable development" section of the previous classification has been strengthened, and the new criteria on the reduction of waste at source and waste sorting have been introduced (sorting in guest bedrooms, in common areas, in maintenance areas...). Rossignol helps tourist accommodations to meet these new criteria with the appropriate equipment: • Point 88: waste paper baskets, • Point 127: pedal bins, Point 130: clothes hooks, Point 135: bicycle racks, • Point 173: first aid boxes and equipment, • Point 229 and 230: waste reduction of products incorporating bulk refilling systems (soap, shower gel dispensers, etc), • Point 232: Indoor sorting bins including bio-waste, and/or outdoor if the establishment has outdoor areas, • Point 233: signage products associated to sorting (signage plates, stickers, ...)

Regulatory standards and certifications

VIGIPRATE NATIONAL SECURITY ALERT SYSTEM

The Vigipirate alert system is a French security measure intended to prevent threats or to react to terrorist actions that was created in 1978 and that is regularly updated. The objective is twofold: **protect people, infrastructures and institutions and prepare responses in case of attack.**

The Vigipirate measure includes 3 levels:

- CONSTANT VIGILANCE in the face of a persistently high but widespread threat
- INCREASED SECURITY RISK OF ATTACK - Enhanced protection in the face of a high level of threat
- ATTACK EMERGENCY - Enhanced protection in the face of a documented and imminent threat of terrorist attack or in the immediate aftermath of an attack

Rossignol helps Local Authorities with the implementation of the first level of the Vigipirate measure (Vigilance). Our specially designed products enable the introduction or strengthening of suitable precautionary and protective measures.

► **Techniques for the accessibility of roads and public spaces :** BOLLARDS AND BARRIERS: allow the separation of traffic lanes, protection of pedestrian areas and the control of access by vehicles.

The minimum width and diameter of the obstacle decreases as its height increases in accordance with the chart.

The principle is that a small height of the post is compensated for by a large diameter and, conversely, that a small diameter is compensated by a high height of the street furniture.

> **Bag holders, bins with laser cut-outs, transparent bins, bins which can be blocked off.** See p3-6-12-15-19-26-27-28-29-32-36-44-45-46-48-49-50

COMPACT LAMINATE (HPL)

► **COMPACT CE CERTIFIED 'EN 438'**

The compact laminate used complies with the requirements of the "external compact laminate" standard, for ageing tests, resistance to UV rays (1,500 h) and to artificial ageing (3,000 h). Compact PEFC certified panels. > See p38-39

HIGH VISIBILITY BOLLARDS

► **Decree of 18 September 2012 amending the Decree of 15 January 2007 on technical requirements for the accessibility of roads and public spaces.**

> **Need for a base unit installed at a maximum of 0.40 metres above the ground.** - See p41

The contrasting colour part of a post shall consist of a strip at least 10 cm high [...] at a height between 1.20 and 1.40 m.

- easily identifiable: visual detection is one of the essential characteristics of the PRM bollard. It is important to make the bollard visible
- minimum dimensions for optimal detection: the dimensions allow the visually impaired to easily detect them using their cane. > See p37

BARRIERS

► **Decree of 1/08/2006 (accessibility of PRM)**

Depending on the height from which a pedestrian could fall, or whether or not the user is visually impaired, barriers should be installed along the path where such a risk exists.

> See p42

LEGISLATION ON PESTS

The circular of 9 August 1978 (Articles 125.1 and 130.5) requires protection against pests, including rodents. This obligation applies to both individuals and Local Authorities, who must not allow rodents to multiply.

Article 17 of the ministerial decree of 9 May 1995 lays down the rules for establishments supplying food to consumers. They are obliged to draw up a plan for the eradication of pests in the event of the detection of a pest, by putting precise specifications in place

Failure to comply with this provision renders the person(s) concerned liable to penalties in the order of a third class fine. Pest control is mandatory for all owners according to Decree 2003-462 of 21 May 2003.

We can identify 3 rules:

- Everyone must avoid the accumulation of waste so as not to attract rodents.
- Regular checks must be carried out to check that pests have not taken up residence on the premises.
- In the event of a confirmed infestation, the main actors must take the necessary measures to eradicate the pests and disinfect the premises.

> See. p28-29-44 à 46

WASTE CONTAINERS

► **The safety/security of wheeled waste containers is subject to the provisions of standards NF-EN 840 1-6:**

- 1 to 4: Standards in relation to the dimensions
- 5 and 5/A1: Performance requirements and test methods
- 6 and 6/A1: Hygiene and safety requirements

> See p52-53

SOFTWOOD CERTIFIED "CLASS 4"

► **Decrees of 05/04/05, all our wood products comply with the French ministerial directive on the promotion of sustainable forest management.**

The treatment system is known as autoclave, arsenic-free, in accordance with new European environmental directives. The treatment impregnates the wood to the core, making it rot-proof: resistant to rotting, insects and fungi. It gives the wood a slightly greenish colour that fades with time.

> see p58-59

DOG HYGIENE

In France dog waste is permitted only in kerbside gutters with the exception of those parts within pedestrian crossings.

All dog owners or guardians are obliged to immediately pick up dog waste by any appropriate means.

This obligation is part of the new Criminal Code (Article R.632-1): "A second class fine is imposed for depositing, abandoning or throwing in a public or private place, with the exception of the places designated for this purpose by the competent administrative authority, rubbish, waste, materials or any other object of any kind whatsoever, if such deposit is not made by the person having the enjoyment of the place or with this person's authorisation ...".

In the event of failure to respect this provision, **the offence can lead to a second class fine** the amount of which varies according to the Local Authority or region.

> See p56-57

Regulatory standards and certifications

SMOKING BAN

► Decree No. 2006-1386 of 15/11/06

Since the 1st of February 2007, the smoking ban applies to businesses, government buildings, schools and health facilities.

Since 1 January 2008, it applies to so-called "meeting" places (cafés, hotels, restaurants, nightclubs, casinos). > See p64-68

CONTACT WITH FOODSTUFFS

► Framework Regulation (EC) no. 1935/2004/EC, Regulation (EC) no. 2023/2006 and other applicable European and national texts:

The material and/or article complies with the relevant requirements of, listed below:
- Concerning plastics intended for contact with food, Regulation (EU) no. 10/2011. It guarantees that the object and materials it is made up of do not pose any toxicity risks when in contact with food or drinks. Good hygiene practices require this type of item to be inert in contact with food, to prevent any migration of products and without catalytic effect that may alter the taste or quality of the foodstuff.

- If recycled materials are present in plastic materials and objects, Regulation (EC) no. 282/2008 ("Green" range) applies. > See p25-77

HACCP (HAZARD ANALYSIS CRITICAL CONTROL POINT)

► Regulation (EC) no. 852/2004 of the European Parliament and of the Council dated 29 April 2004 – regulation entered into force on 1 January 2006

Food waste, inedible by-products and other waste shall be deposited in closed containers, unless food business operators can demonstrate to the competent authority that other types of containers or disposal systems are suitable. These must be properly designed, well maintained and easy to clean and, where necessary, be disinfected. This regulation identifies the following obligations for the waste part: collectors with a closing device, easy to maintain, disinfect and clean, appropriately designed.

To meet these regulatory obligations: collectors equipped with a lid, collectors with shapes facilitating cleaning and flow after rinsing, collectors that facilitate sorting via the available colours, and that do not exacerbate the risk of cross-contamination thanks to the pedal for opening the lid.

> Need to be equipped with collectors that are easy to clean, the need for a pedal and a lid. See p23 à 25-76-77-95-96-107

SELF-EXTINGUISHING PRINCIPLE

► Technical evaluation carried out by the CNPP (National Centre for Prevention and Protection): product complies with the technical specifications. CNPP: a certification body in the fields of fire prevention and protection drawing on the expertise of its laboratories and inspection and audit services.

> See p70-79

FIRST AID

► Article R4224-14 – Decree no. 2008-244 of 7 March 2008

Decree no. 2008-244 of 7 March 2008 concerning the Labour Code contains three basic articles: Article R4224-14 of the Labour Code lays down that "workplaces must be equipped with first-aid equipment that corresponds to the nature of the risks and that is easily accessible". The employer must take the necessary measures to ensure the safety and protect the physical and mental health of workers within its premises.

> See p81-82

FEMININE HYGIENE PERIOD POVERTY

Feminine hygiene

Environmental regulations on the disposal of blood waste

► Article R232-5 to R. 232-5-9: Toilets must be designed so as not to give off any odour, be equipped with flushing facilities and be equipped with toilet paper... Toilets reserved for women must have a receptacle for sanitary towels.

► Article R4228-10: In establishments employing mixed staff, toilets must be separate for female and male staff. Women's toilets must have a container for sanitary towels.

Combating period poverty:

The Government is taking concrete action against student poverty by gradually making the protections they need throughout the year accessible to all female students, free of charge.

This was done in stages:

- The CROUS university residences and university health services must be equipped with dispensers to dispense free environmentally friendly sanitary products.
- Since the start of September 2021, these dispensers must be in place throughout all university campuses.

> See p92-93

ACCESSIBILITY FOR PERSONS WITH REDUCED MOBILITY

► Decree of 1 August 2006 - All establishments open to the public and facilities open to the public must be accessible to PRM (People with Reduced Mobility) from 1 January 2015.

> Requirement for equipment to meet all the needs and obligations in the field of accessibility and autonomy in relation to external accesses, including sanitary blocks. > See p104

► Decree of 18 September 2012 amending the Decree of 15 January 2007 on technical requirements for the accessibility of roads and public spaces.

► Decree of 15 January 2007

Urban equipment and furniture present on footpaths must be of a minimum volume to make them be detectable and ensure the safety of the blind and the visually impaired.

> Need for a base unit installed at a maximum of 0.40 metres above the ground. - See p34-41

AD'AP MEASURE

► Decree of 14 September 2018 on monitoring the progress of scheduled accessibility agendas - JORF no. 0234 of 10 October 2018 - Entry into force: 10 January 2019

Modalities for monitoring the progress of Scheduled Accessibility Agendas (Ad'AP) for the accessibility of establishments open to the public (ERP) and facilities open to the public (IOP).

The decree defines the minimum content of the status reports at the end of the first year and the reviews of the work and other accessibility actions carried out halfway through the duration of the scheduled accessibility agenda.

> See P35-104

Warranties & Maintenance

PRODUCT WARRANTIES

ROSSIGNOL guarantees all products listed in the 2024 catalogue and marketed under this brand name against all defects or faults in design, manufacture and materials.

All the products in the catalogue come with a 2-year warranty unless stipulated otherwise.

It is recalled that the statutory warranty for hidden defects applies in accordance with the statutory provisions.

Products guaranteed for 5 years or 2 years in saline environments.

Warranty exclusions

The warranty does not cover defects resulting from handling, transport and installation.

The warranty is not applicable if the products are not used according to generally accepted practices or in the case of abnormal or improper use of the products.

The contractual warranty does not cover in addition:

- ❑ Defects and their consequences due to improper use other than what it was intended for.
- ❑ Defects and their consequences due to factors outside our control.
- ❑ Defects due to absence or lack of maintenance.
- ❑ Defects due to vandalism.

In all cases, the warranty is limited to the defects on the products and not to the consequences of these defects, for which no compensation is payable.

*Subject to compliance with installation and maintenance guidelines.

CARE INSTRUCTIONS

Our products are guaranteed subject to compliance with installation and maintenance guidelines. ROSSIGNOL advises you to care for your products on a regular basis in order to protect them against wear and tear. The validity of the Rossignol warranty is subject to the proper application of these recommendations.

STEEL

The various treatments applied to the steel (primer, hot-dip galvanising, etc.) extend its lifetime and make it resistant to heat, cold and corrosion. The ideal way to clean it is with soap and water.

Chlorinated products, hydrocarbons and abrasives should be avoided: any use of such products may invalidate the application of the product warranty. The warranty does not apply to any alteration by scratches or blows.

The installation of steel products is not suitable in chlorinated environments (e.g. swimming pools).

ALUMINIUM

Aluminium is a material that is easy to maintain. The ideal way to clean it is with soap and water. N.B.: Chlorinated products, hydrocarbons and abrasives should be avoided: any use of such products may invalidate the application of the product warranty.

SOFTWOOD CERTIFIED "CLASS 4"

The treatment system is known as autoclave, arsenic-free, in accordance with new European environmental directives. The treatment impregnates the wood to the core, making it rot-proof: resistant to rotting, insects and fungi. It gives the wood a slightly greenish colour that fades with time.

It is recalled that the durability and aesthetic appearance of the wood require regular maintenance, the frequency of which depends on the site and climatic conditions (at least every six months). The customer expressly undertakes to provide proof of such maintenance in the event of a warranty claim.

RECYCLED SLATS

This material is the easiest to maintain: simply clean with soap and water.

No high-pressure cleaner : even at low pressure, it will damage the protective layer more quickly.

No bleach: even if well rinsed, bleach leaves black marks under the effect of the sun.

STAINLESS STEEL

A soft cloth or sponge, along with a mild detergent is enough to obtain a perfect result. For brushed surfaces, rub in the direction of the grain. Always wipe the products dry as soon as they are washed. In case of pitting on the surface, the product can be treated with a passivator suitable for stainless steel.

The warranty does not apply to pitting of the surface by corrosion points due to lack of maintenance and requiring cleaning with a passivating stripper. The installation of stainless steel products is not suitable in chlorinated environments (e.g. swimming pools).

HIGH PRESSURE LAMINATE (HPL)

The compact laminate panel (HPL) is the material of excellence for combining durability, maintenance, aesthetics and environmental aspects. UV radiation, bad weather, shock, scratches, abrasion, and burns... nothing stands up to HPL.

THE PLUS: It is an anti-graffiti material that leaves no residue or traces.

Maintenance instructions: Clean with fresh water using a sponge, finish with a soft cloth.

If stains persist, use acetone or white spirit on a perfectly clean soft cloth. Rinse with warm water and finish with a soft cloth.

PLASTIC

This material is the easiest to maintain: simply clean with soap and water.

NO HIGH-PRESSURE CLEANER : even at low pressure, it damages the protective layer more quickly.

OR BLEACH: even if well rinsed, bleach leaves black marks under the effect of the sun.

POLYETHYLENE - PE: Rigid plastic with excellent chemical and impact resistance.

POLYPROPYLENE - PP: Rigid plastic particularly resistant to outdoor and wet conditions.

RECYCLED POLYETHYLENE: Plastic resistant to water, chemicals, chipping, cracking and delamination.

RECYCLED POLYPROPYLENE Water, corrosion, chemical, shock and heat resistant plastic up to 100°C.

CONCRETE

Concrete is most often a single-piece material. It is easy to install on a surface that has been cleaned and cleared. It is highly resistant to temperature variations, bad weather but also to impacts and vandalism.

It is easy to maintain: just use soapy water or PH neutral products only.

An anti-graffiti treatment can be added (subject to quotation - please contact us).

Do not use high pressure cleaners.
