

E D I T O

For years, Rossignol, a French manufacturer, has maintained solid and lasting relations with its partners.

It is thanks to your loyalty and your trust that we are committed to delivering on your projects in the areas of waste sorting, waste collection and hygiene equipment.

Our 2023 collection once again reflects this approach and it is by offering you **high-quality and innovative products made in France** that we want to highlight our industrial know-how with due respect for our planet.

This new edition presents you with 1,345 Solutions, including **119 new products made with responsible and ecological materials**.

In order to live better together while preserving the French heritage we hold dear, we invite you **to discover urban furniture: durable and aesthetically pleasing equipment**, adapted to the needs of users while ensuring safety requirements are met.

Our experience and flexibility are part of our history, and our sales and technical teams are at your service to meet your expectations and ensure user satisfaction.

**Let us continue to develop our collaboration by supporting French manufacturing and improving our quality of life on a daily basis.**

# French know-how in the spotlight

Since 1896, Rossignol has made it a **point of honour** to enhance its French industrial heritage: each year, our teams **imagine, design, develop** and **conceive** new products at our production site in Mayenne (53). In order to ensure your **satisfaction**, we **favour short** circuits to offer ever more **innovative** products.

To **achieve** our objectives, we are **committed to** a **certification** process with the "Origine France Garantie" label. This ensures **clear** and **transparent** information for our consumers concerning the origin of the products. The **OFG certification** pays great attention to **environmental** impact and strives to **safeguard** the French social model while **preserving** French know-how. Values that **align** with those of ROSSIGNOL and its customers!

## Entrust your projects to a custom manufacturer\*

By offering you the personalised support of a professional, we provide you with the advice to see your projects through to completion. Our responsiveness, combined with the flexibility of our production tools, will be our major assets to help you create a winning visual identity regardless of where it is installed.

- Custom design
- Optional extras
- Customisation (colour, marking, logo, etc.)

# Rossignol, an eco-responsible company

From the raw material to the end of a product's life, Rossignol builds, step by step, a **dynamic approach** aimed at **respecting the environment** and producing in a **sustainable way**.

This commitment quickly established itself as a **value for the future** for the company.

Energy performance - Waste reduction - Circular economy

## The Eco-gestures

### Reducing Energy Consumption

Renovation works on the offices and the factory so as to be more **energy efficient**.

### Eco-designed products

Design of **products dedicated to waste sorting**  
Incorporation of **eco-designed products**  
Provision of a **broad selection of spare parts**

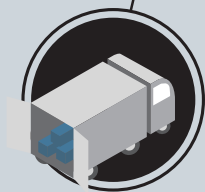

### Optimised mobility

**Electric car** available  
**Optimising business travel**

### Responsible IT

Use of **energy-efficient printers**  
**Environmentally friendly** website host  
Installation of **low-power computers**

### Committed carriers

Service providers signatories to the **CO2 objective charter**

## Waste recovery

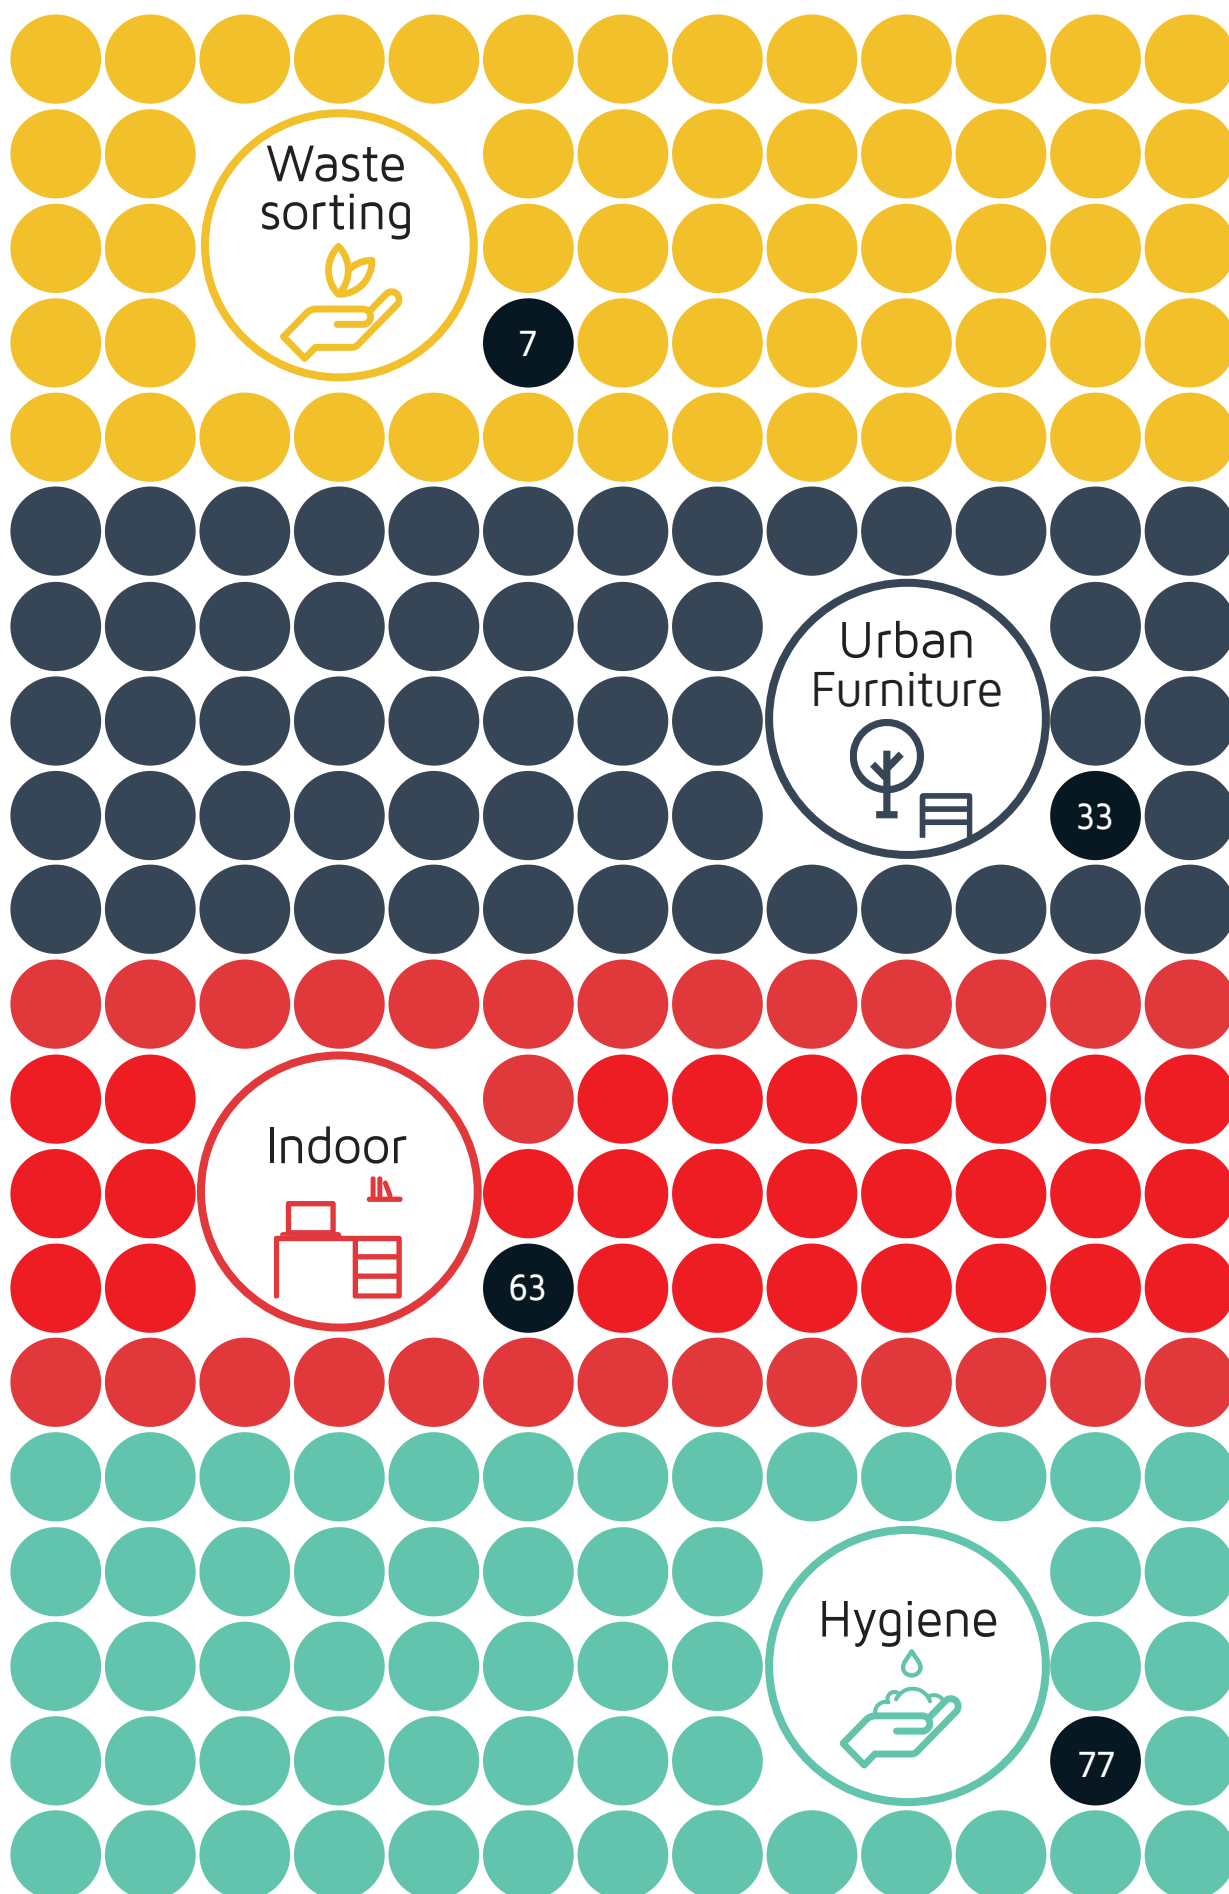

ROSSIGNOL complies with regulatory requirements for selective sorting and waste collection, having installed selective sorting points for its employees throughout the factory and offices.

**20%\*** of our waste is subjected to treatment (incineration, landfill)

**80%\*** of our waste is recycled into 5 waste streams (metal, paper/cardboard, plastic, glass and wood)

\* Based on tonnage data of Rossignol waste collected in 2021

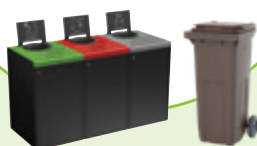

# French Regulations adapted to each situation

More details about the regulations can be found on p107 to 109

## AGEC LAW

**Circular economy and responsible supply:**  
Less waste generation, better sorting, better collection, more reuse and recycling.

## BIOWASTE

**Waste sorting :**  
In view of the 2024 law, think about sorting food waste at source!

## WASTE SORTING

**Waste recycling and recovery:**  
Sorting is becoming simple and effective for our planet because every little bit helps!

## VERMIN CONTROL

**Public health:**  
Avoid accumulation of waste and take necessary measures to control the spread of vermin.

## DOG HYGIENE

**Cleanliness of public places and passageways:**  
Adopt the right attitude by picking up dog droppings every day!

## VIGIPIRATE

**Prevention and Protection :** Take appropriate protective measures by installing products where the content is visible.

## CONTACT WITH FOODSTUFFS

**Consumer protection:**  
Avoid the risk of toxicity or alteration of the taste and quality of foodstuffs or beverages collected by using suitable products.

## HACCP

**Food safety in the food and beverage industry:**  
Ensure and control food safety to prevent hygiene hazards.

## ANTI-SMOKING LAW

**Cleanliness of our public and common areas:**  
Think about equipping your outdoor spaces!

## PRM

**Autonomy and Accessibility:**  
Install equipment to facilitate the movement of PRM (Persons with Reduced Mobility).

## FIRST AID

**Health & safety at work:**  
Install first aid equipment adapted to the nature of the risks and ensure it is easily accessible.

## BLOOD WASTE

**Feminine hygiene:** Equip your toilet cubicles reserved for women with a receptacle for sanitary towels.

## LEGISLATION

### FOOD CONTACT

**Framework Regulation (EC) no. 1935/2004/EC, Regulation (EC) No 2023/2006 and other applicable European and national texts:** It guarantees that the object and materials that make it up pose no toxicity risks when in contact with food or drinks. Good hygiene practices require this type of item to be inert in contact with food, to prevent any migration of products and without catalytic effect that may alter the taste or quality of the foodstuff.

### CERTIFICATION

#### SOFTWOOD CERTIFIED "CLASS 4"

The treatment system is known as autoclave, arsenic-free, in accordance with new European environmental directives. The treatment impregnates the wood to the core, making it rot-proof: resistant to rotting, insects and fungi. It gives the wood a slightly greenish colour that fades with time.

All our wood products comply with the ministerial directive on the promotion of sustainable forest management (decrees of 05/04/05).

# STOP cigarette butts!

It takes 10 to 12 years for a cigarette butt to disappear for good, and just one of them is enough to pollute 500 litres of water.

Let us do something to keep our common areas clean.

Think about equipping your public spaces with our ashtrays.

See the anti-smoking law (p109)

### ELECTRIFIED GRID INSECT KILLER - 40 W

- Polished stainless steel
- Suspended or free-standing
- Side switch
- Electrical protection CL I – IP21

■ Ref.51441 - 40 W - Range 150 m<sup>2</sup>

Removable pan

## CONSUMABLES

### KILEO

#### BATCH OF 4 SHATTER-PROOF FLUORESCENT TUBES + STARTERS

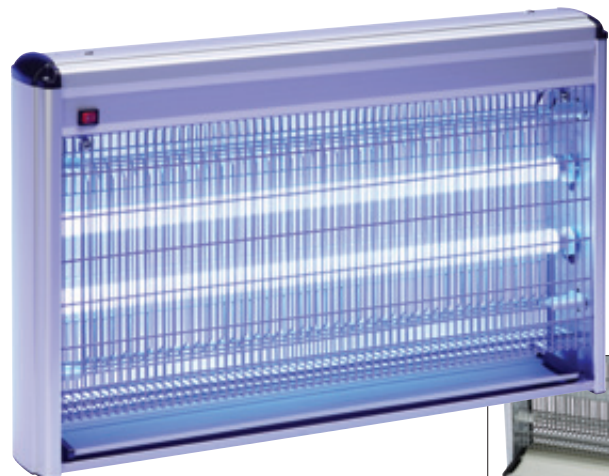

- Service life: around 8,000 hours
- Consumable for the electrified grille insect killer 40W (Ref. 51441)

Ref.51520 - 20 W - Shatter-proof - 4 tubes + 4 starters

Chain for ceiling-mounting

- + VERY LONG LIFE LED TUBE
- + LOW ENERGY CONSUMPTION

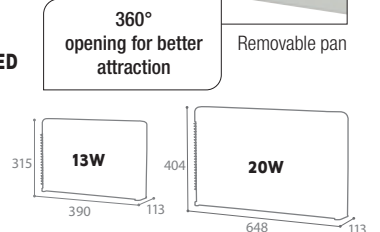

## KILEO

### INSECT KILLER WITH AN ELECTRIFIED LED GRILL - 13 W / 20 W

- Aluminium and plastic
- Hanging bracket (clips or free-standing)
- Switch on front
- Electrical protection CL I – IPX0

■ Ref.51488 - 13 W - Range 80 m<sup>2</sup>

■ Ref.51489 - 20 W - Range 150 m<sup>2</sup>

360°  
opening for better  
attraction

Removable pan

## CONSUMABLES

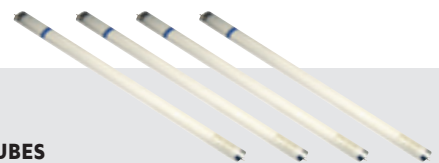

### KILEO

#### BATCH OF 4 LED TUBES

- Lifetime: around 15000 hours
- Consumable for insect killers (Ref. 51488 and 51489)

Ref.51486 - 6.5 W - 4 LED tubes

Ref.51487 - 10 W - 4 LED tubes

## KILEO

### ELECTRIFIED GRID INSECT KILLER - 11 W

- ABS plastic, fire-resistant
- Free-standing
- Side switch
- Electrical protection CL II – IPX2
- Mains connection

Ref. 51440 - 11W - Rayon d'action 80 m²

Bac de vidage amovible

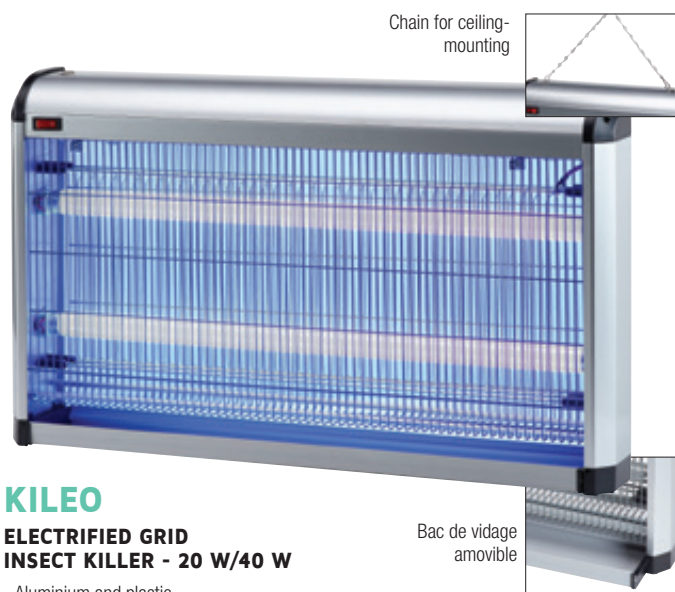

## CONSUMABLES

### KILEO

#### COMPACT FLUORESCENT TUBE

- Lifetime: 8,000 hours
- Consumable for the compact insect killer (Ref. 51440)

Ref. 51528 - 11 W - per unit

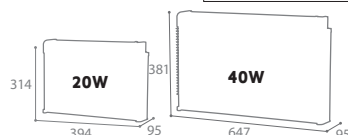

## KILEO

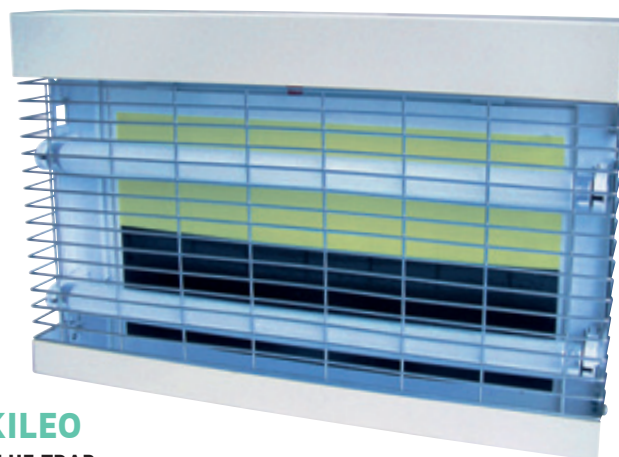

### ELECTRIFIED GRID INSECT KILLER - 20 W/40 W

- Aluminium and plastic
- Suspended or free-standing
- Switch on front
- Electrical protection CL I - IP21

- Ref. 51536 - 20 W - Range 100 m²
- Ref. 51538 - 40 W - Range 150 m²

Bac de vidage amovible

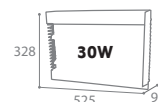

## KILEO

### GLUE TRAP INSECT KILLER - 30 W

- Anti-UV powder-coated steel
- Wall mounting with plate or suspension with chain
- Captures insects thanks to its glue trap
- Electrical protection CL I - IPX0 - Mains connection
- HACCP compliant

□ Ref. 51490 - 30 W - Range 100 m²

## CONSUMABLES

### KILEO

#### BATCH OF 4 SHATTER-PROOF FLUORESCENT TUBES + STARTERS

- Service life: around 8,000 hours
- Consumable for the electrified grid insect killer 20 W (Ref. 51536) and 40W (Ref. 51441 and 51538)

Ref. 51519 - 10 W - Shatter-proof - 4 tubes + 4 starters

Ref. 51520 - 20 W - Shatter-proof - 4 tubes + 4 starters

## CONSUMABLES

### KILEO

#### BATCH OF 5 OR 5 SHATTER-PROOF FLUORESCENT TUBES + STARTERS

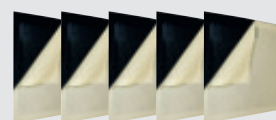

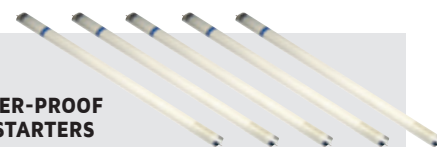

- Service life: around 8,000 hours
- Consumable for the fly paper insect killer 15 W (Ref. 51490)

Ref. 51492 - 15 W - Shatter-proof - 5 tubes + 5 starters - White

#### BATCH OF 5 GLUE TRAPS

- Adhesive plate neutralising flying insects
- Consumable for the fly paper insect killer (Ref. 51490)

Ref. 51491 - Batch of 5

# Customise to your colours It's simple!

Rossignol enables its customers to stand out in the development of their projects. By designing sustainable customisable products, we offer the ability to promote innovative projects. Trust us and let your originality express itself.

# Let's give our bio-waste a second life

## How should bio-waste be defined?

**Biowaste (also called organic waste) includes:**

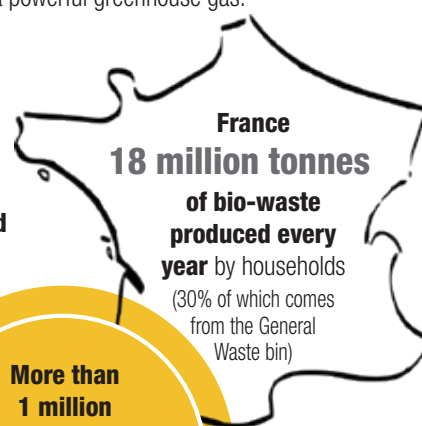

- Waste resulting from the maintenance of green spaces
- Kitchen and table waste (KTW)
- Waste from the agri-food industry

## What does the law say?

The Act of 10 February 2020 on the **fight against waste and the circular economy** amended Article L. 541-21-1 of the Environmental Code by specifying that, from 1 January 2023, this obligation applies to persons who produce or hold more than five tonnes of bio-waste per year. **From 1 January 2024, all biowaste and waste oils must be collected separately for recovery.** (See opposite)

## Why sort bio-waste?

Land-filling these bio-waste products promotes the emission of greenhouse gases: the compaction of organic waste causes the fermentation of food waste in an oxygen-free environment. These are the conditions conducive to the emission of methane into the atmosphere, a powerful greenhouse gas.

**More than 1 million tonnes of biowaste per annum from commercial or collective catering professionals**

## What are the ROSSIGNOL solutions?

Rossignol provides you with bio-waste solutions, for indoor and outdoor use!

## AGEC LAW

(ANTI-WASTE FOR A CIRCULAR ECONOMY)

► **Law no. 2020-105-10 February 2020:** This law, in force since 1 January 2020, will be structured up to 2040 to fundamentally change production, distribution and consumption methods. It is aimed at transforming our linear economy, produce, consume, throw away, into a circular economy.

**It is divided into five main areas:**

- Take out disposable plastic
- Better information for consumers
- Fight against waste and for solidarity-based reuse
- Take action against planned obsolescence
- To produce better

> See p8-32

## WASTE SORTING

Article 88 of the AGEC law 2020, concerning the sorting of food waste at source!

In order to implement the sorting of **household food waste** at source throughout France by 1 January 2024, it is up to each community to study and identify the most relevant solutions to sort food waste at source and ensure that it can be recovered and not landfilled. Separate collection of food waste by the community is complementary to local composting.

► The law of **12 July 2010**, known as the Grenelle 2 law, introduced an obligation for large producers to sort at source and recover biowaste and waste oils.

Since **1 January 2016**, producers of more than 10 tonnes of biowaste and 60 litres of waste oils per year have been concerned.

► The Act of **10 February 2020** on the fight against waste and the circular economy amended Article L. 541-21-1 of the Environmental Code by specifying that from **1 January 2023**, this obligation applies to persons who produce or hold more than five tonnes of bio-waste per year. From **1 January 2024**, all biowaste and waste oils must be collected separately for recovery.

> See p19 0 21, 47

## WASTE SORTING

► **Act of 15/07/1975: first act organising the collection and treatment of waste in France.** Waste collection, transport and treatment operations must be carried out under clean conditions in order to avoid "any risk to the environment and human health". This act establishes the founding principle of "polluter pays".

► **Law of 13/07/1992:** also known as the Royal Act. It aims to reinforce the provisions of the 1975 act and requires companies to recycle their waste. Since 1992, waste has been a source of energy and raw materials that we are no longer allowed to throw away or destroy.

► **Law of 12/07/2010** makes it compulsory for major producers to set up waste sorting and collection of biowaste and edible oil waste (threshold for the application of the Decree in 2016: 10 tonnes per annum of biowaste, 60 L of edible oils).

► **Article L 541-2 of the Environment Code:** each company is responsible for the management of the waste it produces even when it is transferred to a third party for treatment. The company must ensure that its disposal process complies with regulations.

► **Decree no. 2016-288 of 10/03/2016:** It is the duty of each company to sort its paper, metal, plastic, glass and wood waste better so that it may be reused or recycled. Companies must separate these materials from other waste either by having a system at source or by using an automatic sorting system with a third party.

► **From 1 January 2022:** all paper and packaging, whether plastic, metal or cardboard, may be placed in the yellow bins and containers. This new directive will make it possible to reduce the tonnage of household waste produced each year on the metropolitan territory, while achieving better recycling of the waste collected.

> **Need for waste sorting equipment. See p8 - 32**

► **On 1 January 2025:** the obligation to sort selectively will be extended to all public spaces: streets, squares, gardens, beaches, etc. Local authorities will thus be obliged to replace street bins with waste bins allowing the sorting of packaging and paper. These measures are aimed at speeding up the recovery and recycling of "out-of-home" packaging.

## NEW

### OFG (Origine France Garantie) (GUARANTEE OF FRENCH ORIGIN)

The Origine France Garantie (OGF) label was officially presented to the National Assembly on 19 May 2011. The OFG certification is based on a fully-fledged certification process. Certification is done by authorised organizations. To obtain OFG certification, 2 cumulative criteria are mandatory: the place from where the product gets its essential characteristics is located in France and at least 50% of the unit cost price is acquired in France. The label allows companies to promote the product in France and consumers to choose to buy French.

> See p1-9-10-19-40-78-107

# Regulatory standards and certifications

## VIGIPRATE NATIONAL SECURITY ALERT SYSTEM

The Vigipirate alert system is a French security measure intended to prevent threats or to react to terrorist actions that was created in 1978 and that is regularly updated. The objective is twofold: **protect people, infrastructures and institutions and prepare responses in case of attack.**

### The Vigipirate measure includes 3 levels:

- CONSTANT VIGILANCE in the face of a persistently high but widespread threat
- INCREASED SECURITY RISK OF ATTACK - Enhanced protection in the face of a high level of threat
- ATTACK EMERGENCY - Enhanced protection in the face of a documented and imminent threat of terrorist attack or in the immediate aftermath of an attack

Rossignol helps the Public Bodies with the implementation of the first level of the Vigipirate measure (Vigilance). Our specially designed products enable the introduction or strengthening of suitable precautionary and protective measures.

### ► Techniques for the accessibility of roads and public spaces :

POLES AND BARRIERS: allow the separation of traffic lanes, protection of pedestrian areas and the control of access by vehicles.

The minimum width and diameter of the obstacle decreases as its height increases in accordance with the chart below.

The principle is that a small height of the post is compensated for by a large diameter and, conversely, that a small diameter is compensated by a high height of the furniture.

> **Bag holders, perforated bins, transparent bins, blockable bins.**  
See p1-10-13-17-28-32-39-40-41-43-44-45

## COMPACT LAMINATE (HPL)

### ► COMPACT CE CERTIFIED 'EN 438'

The compact laminate used complies with the requirements of the "external compact laminate" standard, for ageing tests, resistance to UV rays (1,500 h) and to artificial ageing (3,000 h). Compact PEFC certified panels. > See p35

## HIGH VISIBILITY POLES

► **Decree of 18 September 2012 amending the Decree of 15 January 2007 on technical requirements for the accessibility of roads and public spaces.**

> **Need for a base unit installed at a maximum of 0.40 metres above the ground. - See p30-31-37-98**

The contrasting colour part of a post shall consist of a strip at least 10 cm high [...] at a height between 1.20 and 1.40 m.

- easily identifiable: visual detection is one of the essential characteristics of the PRM post. It is important to make the posts visible
- minimum dimensions for optimal detection: the dimensions allow the visually impaired to easily detect them using their cane. > See p37

## BARRIERS

► **Decree of 1/08/2006 (accessibility of PRM)**

Depending on the possible height of a pedestrian or whether the user is visually impaired or not, the barriers must be installed along the path where such a risk exists.

> See p37

## PEST REGULATIONS

**The circular of 9 August 1978 (Articles 125.1 and 130.5)** requires protection against pests, including rodents. This obligation applies to both individuals and communities, who must not allow rodents to multiply.

**Article 17 of the ministerial decree of 9 May 1995** lays down the rules for establishments supplying food to consumers. They are obliged to draw up a plan for the eradication of pests in the event of the detection of a pest, by putting precise specifications in place

Failure to comply with this provision renders the person(s) concerned liable to penalties in the order of a third class fine. Pest control is mandatory for all owners according to Decree 2003-462 of 21 May 2003.

### We can identify 3 rules:

- Everyone must avoid the accumulation of waste so as not to attract rodents.
- Regular checks must be carried out to check that pests have not taken up residence on the premises.
- In the event of a confirmed infestation, the main actors must take the necessary measures to eradicate the pests and disinfect the premises.

> See p24-25-39-40-41

## WASTE CONTAINERS

► **The safety/security of wheeled waste containers is subject to the provisions of standards NF-EN 840 1-6:**

- 1 to 4: Standards in relation to the dimensions
- 5 and 5/A1: Performance requirements and test methods
- 6 and 6/A1: Hygiene and safety requirements

> See p47

## SOFTWOOD CERTIFIED "CLASS 4"

► **Decrees of 05/04/05, all our wood products comply with the French ministerial directive on the promotion of sustainable forest management.**

The treatment system is known as autoclave, arsenic-free, in accordance with new European environmental directives. The treatment impregnates the wood to the core, making it rot-proof: resistant to rotting, insects and fungi. It gives the wood a slightly greenish colour that fades with time.

> see p51-52

## DOG HYGIENE

Dog waste is permitted only in gutters with the exception of those parts within the pedestrian crossings.

**All dog owners or guardians are obliged to immediately pick up dog waste by any appropriate means.**

This obligation is enshrined in the new Criminal Code (Article R.632-1): "A second class fine is imposed for depositing, abandoning or throwing in a public or private place, with the exception of the places designated for this purpose by the competent administrative authority, rubbish, waste, materials or any other object of any kind whatsoever, if such deposit is not made by the person having the enjoyment of the place or with this person's authorisation ...".

In the event of failure to respect this provision, **the offence can lead to a second class fine** the amount of which varies according to the municipality or region.

> See p56-57

# Regulatory standards and certifications

## SMOKING BAN

► **Decree No. 2006-1386 of 15/11/06**

Since the 1<sup>st</sup> of February 2007, the smoking ban applies to businesses, government buildings, schools and health facilities.

Since 1 January 2008, it applies to so-called "meeting" places (cafés, hotels, restaurants, nightclubs, casinos). > **See p58-62**

## CONTACT WITH FOODSTUFFS

► **Framework Regulation (EC) no. 1935/2004/EC, Regulation (EC) no. 2023/2006 and other applicable European and national texts:**

The material and/or article complies with the relevant requirements of, listed below:  
- Concerning plastics intended for contact with food, Regulation (EU) no. 10/2011. It guarantees that the object and materials it is made up of do not pose any toxicity risks when in contact with food or drinks. Good hygiene practices require this type of item to be inert in contact with food, to prevent any migration of products and without catalytic effect that may alter the taste or quality of the foodstuff.

- If recycled materials are present in plastic materials and objects, Regulation (EC) no. 282/2008 (Green range) applies. > **See p21-71**

## HACCP (HAZARD ANALYSIS CRITICAL CONTROL POINT)

► **Regulation (EC) no. 852/2004 of the European Parliament and of the Council dated 29 April 2004 – regulation entered into force on 1 January 2006**

Food waste, inedible by-products and other waste shall be deposited in closed containers, unless food business operators can demonstrate to the competent authority that other types of containers or disposal systems are suitable. These must be properly designed, well maintained and easy to clean and, where necessary, be disinfected. This regulation identifies the following obligations for the waste part: collectors with a closing device, easy to maintain, disinfect and clean, appropriately designed.

To meet these regulatory obligations: collectors equipped with a lid, collectors with shapes facilitating cleaning and flow after rinsing, collectors that facilitate sorting via the available colours, and that do not exacerbate the risk of cross-contamination thanks to the pedal for opening the lid.

> **Need to be equipped with collectors that are easy to clean, the need for a pedal and a lid. See p20-22-71-89-90-101**

## SELF-EXTINGUISHING PRINCIPLE

► **Technical evaluation carried out by the CNPP (National Centre for Prevention and Protection):** product complies with the technical specifications. CNPP: a certification body in the fields of fire prevention and protection drawing on the expertise of its laboratories and inspection and audit services.

> **See p64-73**

## FIRST AID

► **Article R4224-14 – Decree no. 2008-244 of 7 March 2008**

Decree no. 2008-244 of 7 March 2008 concerning the Labour Code contains three basic articles: Article R4224-14 of the Labour Code lays down that "workplaces must be equipped with first-aid equipment that corresponds to the nature of the risks and that is easily accessible". The employer must take the necessary measures to ensure the safety and protect the physical and mental health of workers within its premises.

> **See p67-68**

## FEMININE HYGIENE MENSTRUAL INSECURITY

### Feminine hygiene

Environmental regulations on the disposal of blood waste

► **Article R232-5 to R. 232-5-9:** Toilets must be designed so as not to give off any odour, be equipped with flushing facilities and be equipped with toilet paper... Toilets reserved for women must have a receptacle for sanitary towels.

► **Article R4228-10:** In establishments employing mixed staff, toilets must be separate for female and male staff. Women's toilets must have a container for sanitary towels.

### Combating menstrual poverty:

The Government is taking concrete action against student insecurity by gradually making the protections they need throughout the year accessible to all female students, free of charge.

### This access was been carried out in stages:

- The university residences of the Crous centre for student affairs and the university health services must be equipped with dispensers of free hygienic protection products that respect the environment.
- Since the start of the academic year in September 2021, these dispensers must be deployed on all university campuses. > **See p86-87**

## ACCESSIBILITY FOR PERSONS WITH REDUCED MOBILITY

► **Decree of 1 August 2006** - All establishments open to the public and facilities open to the public must be accessible to PRM (People with Reduced Mobility) from 1 January 2015.

> **Requirement for equipment to meet all the needs and obligations in the field of accessibility and autonomy in relation to external accesses, including sanitary blocks. > See P.98**

► **Decree of 18 September 2012 amending the Decree of 15 January 2007 on technical requirements for the accessibility of roads and public spaces.**

► **Decree of 15 January 2007**

Urban equipment and furniture present on footpaths must be of a minimum volume to make them be detectable and ensure the safety of the blind and the visually impaired.

> **Need for a base unit installed at a maximum of 0.40 metres above the ground. - See p23-28**

### AD'AP MEASURE

► **Decree of 14 September 2018 on monitoring the progress of scheduled accessibility agendas - JORF no. 0234 of 10 October 2018 - Entry into force: 10 January 2019**

Modalities for monitoring the progress of Scheduled Accessibility Agendas (Ad'AP) for the accessibility of establishments open to the public (ERP) and facilities open to the public (IOP).

The decree defines the minimum content of the status reports at the end of the first year and the reviews of the work and other accessibility actions carried out halfway through the duration of the scheduled accessibility agenda.

> **See P31-70**

# Warranties & Maintenance

## PRODUCT WARRANTIES

**ROSSIGNOL guarantees all products listed in the 2023 catalogue and marketed under this brand name against all defects or faults in design, manufacture and materials.**

All the products in the catalogue come with a 2-year warranty unless stipulated otherwise.

Products guaranteed for 5 years and 2 years in saline environments.

It is recalled that the statutory warranty for hidden defects applies in accordance with the statutory provisions.

## Warranty exclusions

The warranty does not cover defects resulting from handling, transport and installation.

The warranty is not applicable if the products are not used according to generally accepted practices or in the case of abnormal or improper use of the products.

### The contractual warranty does not cover in addition:

- ❑ Defects and their consequences related to use that is not in accordance with the intended purpose of the product.
- ❑ Defects and their consequences related to any external cause.
- ❑ Defects due to absence or lack of maintenance.
- ❑ Defects due to vandalism.

In all cases, the warranty is limited to the defects on the products and not to the consequences of these defects, for which no compensation is payable.

\* Subject to compliance with installation and maintenance conditions.

## CARE INSTRUCTIONS

**Our products are guaranteed subject to compliance with installation and maintenance conditions. ROSSIGNOL advises you to care for your products on a regular basis in order to protect them against wear and tear. The validity of the Rossignol warranty is subject to the proper application of these recommendations.**

### STEEL

The various treatments applied to the steel (primer, hot-dip galvanising, etc.) extend its lifetime and make it resistant to heat, cold and corrosion. The ideal way to clean it is with soap and water.

**Chlorinated products, hydrocarbons and abrasives should be avoided:** any use of such products may invalidate the application of the product warranty. The warranty does not apply to any alteration by scratches or blows. The installation of steel products is not suitable in chlorinated environments (e.g. swimming pools).

### ALUMINIUM

Aluminium is a material that is easy to maintain. The ideal way to clean it is with soap and water. N.B.: Chlorinated products, hydrocarbons and abrasives should be avoided: any use of such products may invalidate the application of the product warranty.

### SOFTWOOD CERTIFIED "CLASS 4"

The treatment system is known as autoclave, arsenic-free, in accordance with new European environmental directives. The treatment impregnates the wood to the core, making it rot-proof: resistant to rotting, insects and fungi. It gives the wood a slightly greenish colour that fades with time.

It is recalled that the durability and aesthetic appearance of the wood require regular maintenance, the frequency of which depends on the site and climatic conditions (at least every six months). The customer expressly undertakes to provide proof of such maintenance in the event of a warranty claim.

### RECYCLED SLATS

This material is the easiest to maintain: simply clean with soap and water. No high-pressure cleaner : even at low pressure, it will damage the protective layer more quickly. No bleach: even if well rinsed, bleach leaves black marks under the effect of the sun.

### STAINLESS STEEL

A soft cloth or sponge, along with a little dish-washing liquid is enough to obtain a perfect result. For brushed surfaces, rub in the direction of the polishing. Always wipe the products dry as soon as they are washed. In case of attack on the material (pitting), the product can be treated with a passivator suitable for stainless steel. The warranty does not apply to pitting of the surface by corrosion points due to lack of maintenance and requiring cleaning with a passivating stripper. The installation of stainless steel products is not suitable in chlorinated environments (e.g. swimming pools).

### PLASTIC

This material is the easiest to maintain: simply clean with soap and water. **NO HIGH-PRESSURE CLEANER** : even at low pressure, it damages the protective layer more quickly.

**OR BLEACH:** even if well rinsed, bleach leaves black marks under the effect of the sun.

**POLYETHYLENE - PE:** Rigid plastic with excellent chemical and impact resistance.

**POLYPROPYLENE - PP:** Rigid plastic particularly resistant to outdoor and wet conditions.

**RECYCLED POLYETHYLENE:** Plastic resistant to water, chemicals, chipping, cracking and delamination.

**RECYCLED POLYPROPYLENE** Water, corrosion, chemical, shock and heat resistant plastic up to 100°C.

### HIGH PRESSURE LAMINATE (HPL)

**NEW**

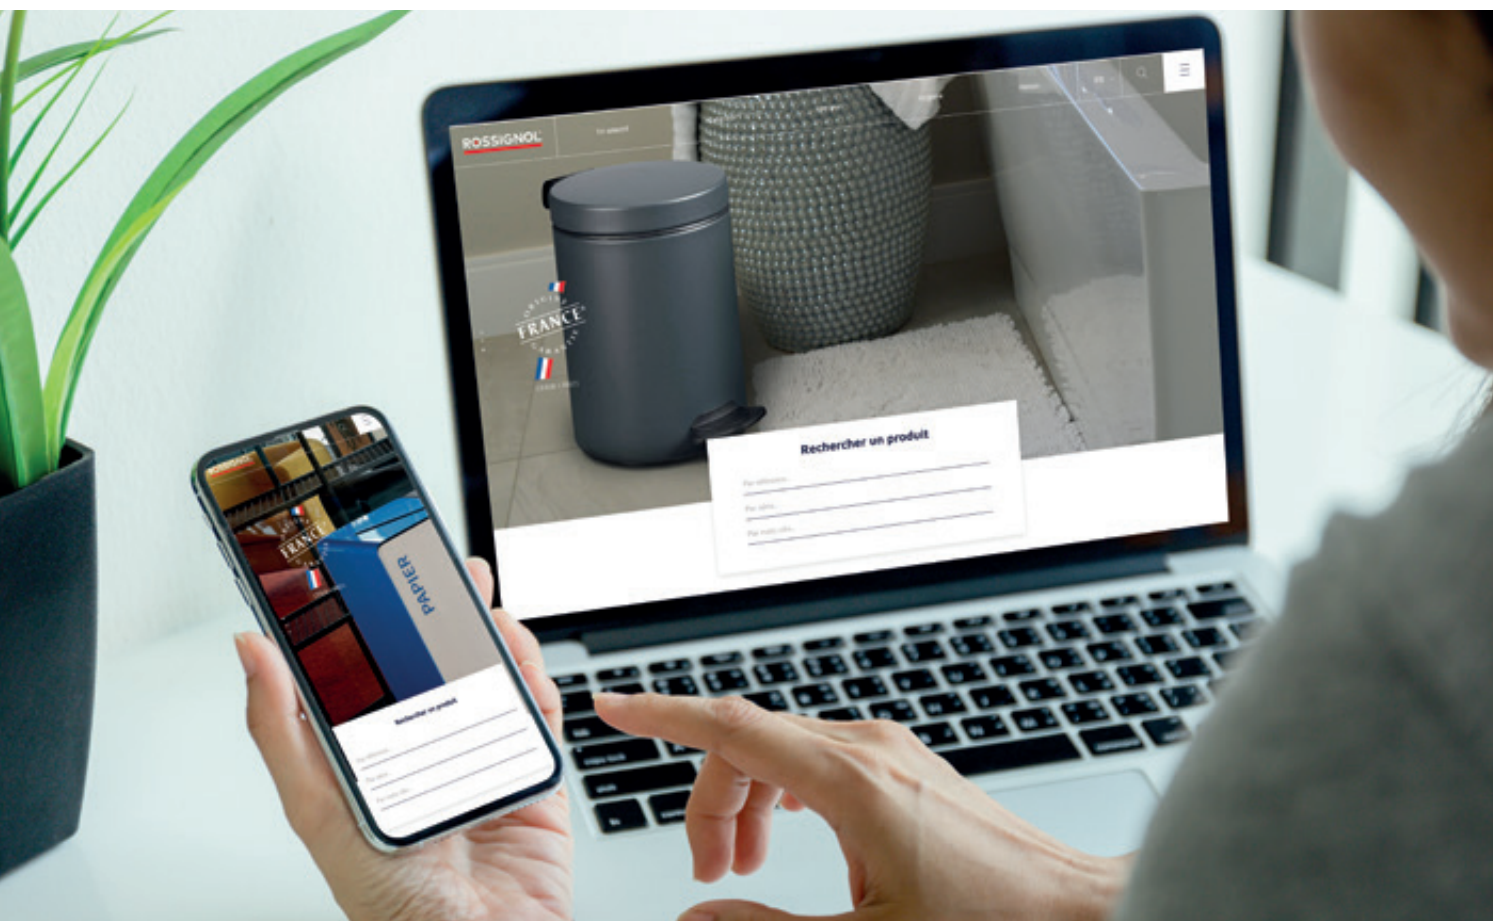

The compact laminate panel (HPL) is the material of excellence for combining durability, maintenance, aesthetics and environmental aspects. UV radiation, bad weather, shock, scratches, abrasion, and burns... nothing resists HPL.

**THE PLUS:** It is an anti-graffiti material that leaves no residue or traces.

Maintenance instructions

Clean with fresh water using a sponge, finish with a soft cloth.

If stains persist, use acetone or white spirit on a perfectly clean soft cloth. Rinse with warm water and finish with a soft cloth.
